However, the admitted prior art do not disclose, teach or suggest "a first firewall control block, wherein said first firewall control block includes: an associate security identification portion that identifies one or more associates of said first application as identified associates, and wherein each one of said one or more identified associates has access privilege with respect to said first application; and an access-operations portion that for each one of said one or more associates identifies one or more operations that have been allowed to be performed, wherein the security context block presents the first security identification to the first firewall control block responsive to determining that said first security identification can be authenticated."
